What We're Reading

"Boeing says its fleet will be able to fly on 100% biofuel by 2030"

Boeing says it will begin delivering commercial airplanes capable of flying on 100% biofuel by 2030. The company will advance to jet systems, raise fuel-blending requirements, and require safety certification by global regulators to reach the industry target of slashing carbon emissions in half by 2050.

What We're Reading

"Race for the superfuel"

An ultra large container ship fueled entirely by LNG; airlines working hard to procure Sustainable Aviation Fuel (SAF); and a rise in biofuel production worldwide— all strategies for companies worldwide to challenge themselves to integrate zero-emission technologies into their operations.
